# WEATHER SYNOPSIS BY REGION

## **NORTHERN CALIFORNIA**

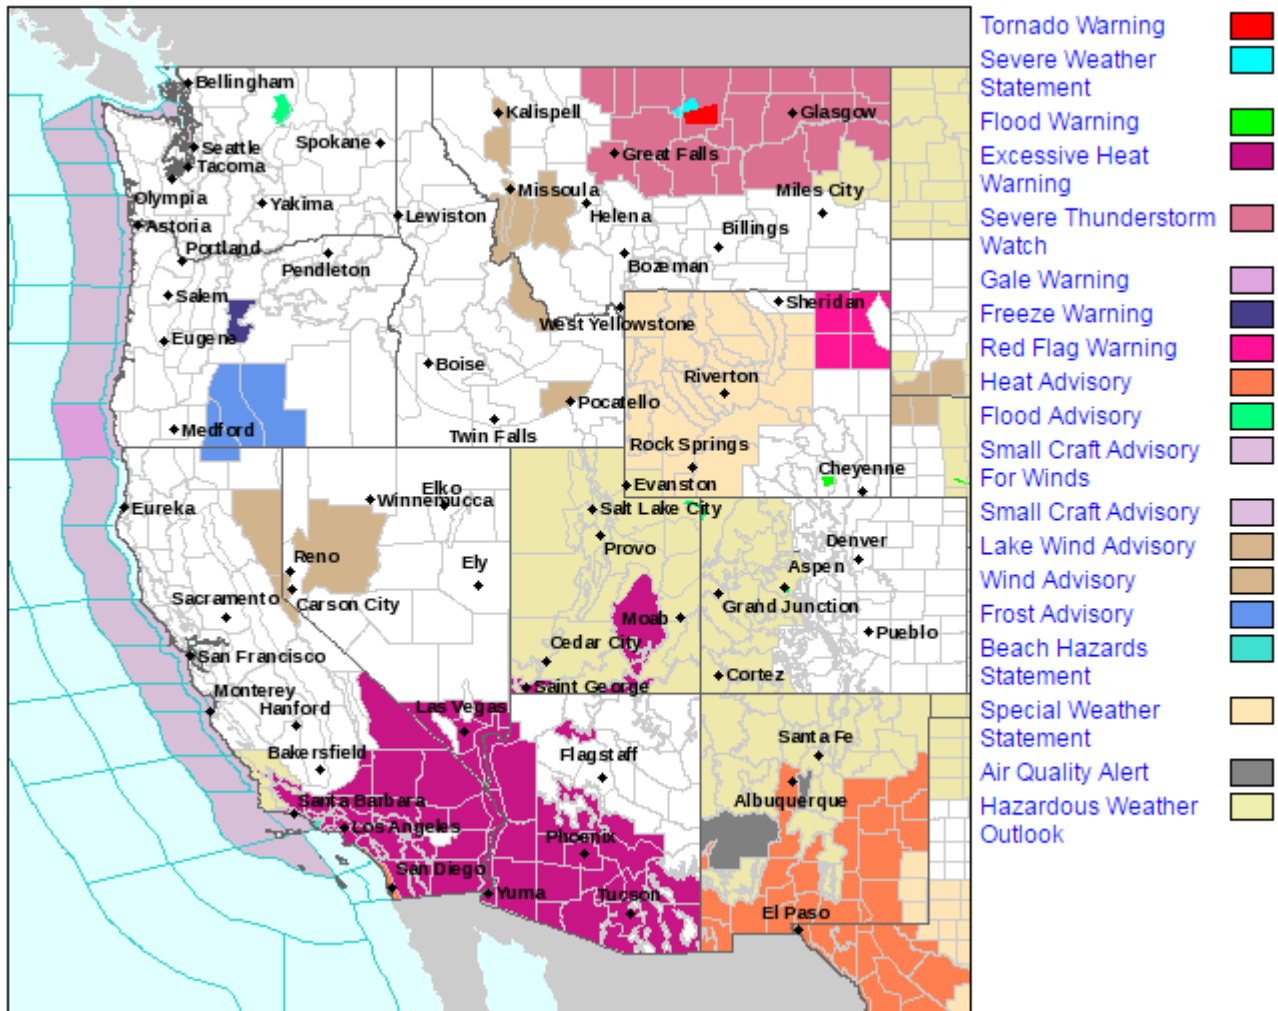

The wet unsettled weather is only confined to the eastern portion of the Northern California this morning, and it will gradually end by early afternoon. The low pressure system and wet unsettled weather will lift off to the northeast today as strong high pressure over the Deserts pushes to the northwest. Low pressure will remain west of the Pacific northwest and a light southwest flow aloft will prevail over the Northern California. This pattern will produce a rapid warming and drying trend across Northern California today through Tuesday. Triple digit heat is expected to develop for the warmer inland areas with potential for the warmest inland locations to reach highs of 100-105. RH will drop to 8-18% in these areas and poor overnight RH recovery will be common. Periods of light north to northeast surface winds will enhance the hot and dry conditions from the western Sierra slopes to the coast beginning Sunday. A disturbance within the southwest flow could possibly produce isolated to scattered thunderstorms over the higher terrain on Wednesday. Any storms with this pattern will produce very little rainfall. Showers and somewhat wetter thunderstorms are possible Thursday and Friday in far Northern California as another disturbance passes to the north. The remainder of the region will be dry and a bit warmer than normal Wed-Fri, but cooler than earlier in the week.

## **SOUTHERN CALIFORNIA**

Strong high pressure centered over the Four Corners Area will bring 5 to 10 degrees of warming to most locations along with widespread humidity in the single digits and teens each day through Monday. Maximum temperatures will be in the mid 70s to mid 80s across the mountains and 90s to 102 in the valleys today. Record or near record heat will occur Sunday and Monday, with the warmer valley locations approaching 110 degrees Sunday and 115 degrees Monday. North to northeast winds of 15 to 25 mph with gusts to 40 mph will surface across the South Coast of Santa Barbara nights through early mornings through Tuesday. The high pressure over the Four Corners Area will shift east bringing a cooling trend and an increase in humidity Tuesday through Thursday. Isolated afternoon thunderstorms will be possible over the mountains and deserts Wednesday and Thursday. Westerly afternoon winds of 15 to 25 mph with gusts to 40 mph will surface across the desert passes Tuesday through Thursday. High pressure will shift west once again Friday through next weekend for a gradual warming trend along with very low humidity. Nightly north winds will return to the South Coast of Santa Barbara Friday through next weekend.
